I NEED MORE SPACE BUT WHAT SIZE?

SHEDS

16 x 20 Metal Shed

This 320 SQFT shed is a perfect choice for a typical backyard. It features an 8' x 8' sectional or roll up door as well as a 3070 man door, a set of shelves and tool wall hanging space.

Depending on deck size, the average lawn tractor is 48" x 72"

A 15 drawer Husky tool chest is 52" by 20" deep

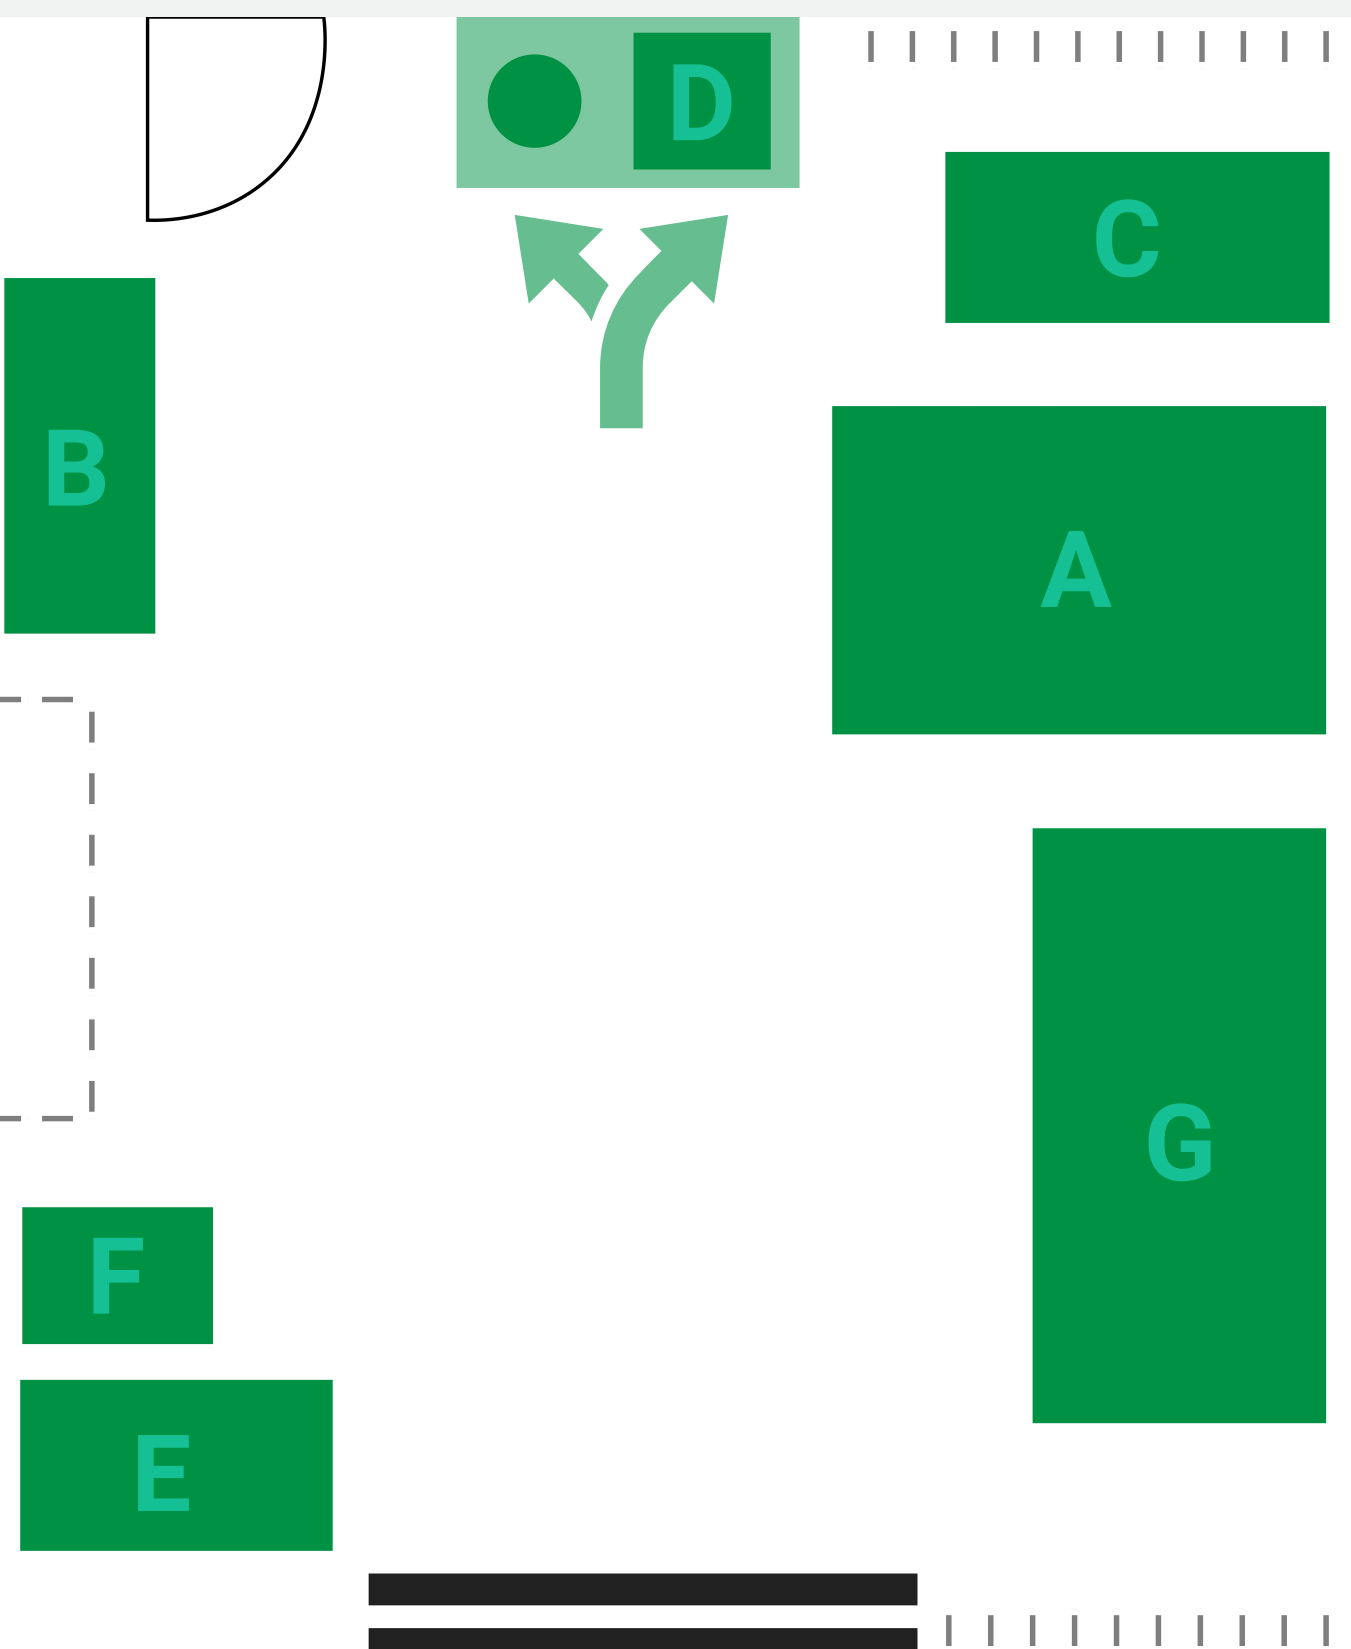

Room for two bikes side by side or these can be hung on a wall

A Rigid shop vac will occupy a 2' square area

20 x 24 Metal Shed

This 480 SQFT shed gives you a little more than 30% more space than the 16' x 20' shed. This shed features the same 3070 man door and sectional door, but the extra space provides room for a motorcycle, work bench and two extra wall and shelving areas.

The typical Toro snow blower is 2' wide and up to 4' long with the handles out

A Honda power washer will use up about 20" x 24" of space

Your Harley Street 750 will need around 7.5' to park and leave you room to pull ride out

In the larger shed we've left room for a 4' wide by 2' deep work bench. This also allows room for a nice stool and Rigid shop vac to nest under the table top.
